

Keeping it clean

BinSpring™ is a rear-affixed, gravity fed, torsion spring design, manufactured from quality stainless steel. Premium BinSpring™ is warranted for 10years, the same as the life of a wheelie bin.

BinSpring™ is 100% Australian owned and operated, based out of Perth, Western Australia. Our commitment to communities and environmental responsibility drives our passion for our product.

Premium BinSpring™

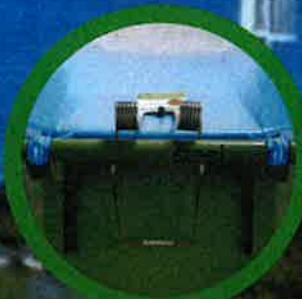

- is tough and durable, no tools required
- Ensures bin lids are closed during collection
- Ensures that bin lids are closed after collection
- Provides cost savings to councils by mitigating damage incurred to lids when bins fall over
- Reduces (or doesn't slow) time taken on waste collection routes
- Significantly reduces the need for residents to clean up spilled rubbish as a result of wheelie bin lids being open
- Significantly reduces rubbish in neighbourhoods as a result of native or domestic wildlife being able to get into rubbish bins
- Comes with a 10 year warranty
- Is 100% recyclable. Made from 304 Stainless steel.

Let's work together to keep our communities clean

Install your BinSpring™ in three simple steps

1 To attach, slide the BinSpring™ between the handle and the side of the bin – the longer arm first so that the short arm sits on the lid and the long arm down the side of the bin.

2 Use your fingers to push the BinSpring™ on to the handle. The coils should sit on the handle.

3 Add the provided cable tie to secure your BinSpring™. Make sure there is enough slack so that the BinSpring™ can hang down if you need to keep your bin lid open.

To order your BinSprings™ go to www.binspring.com.au

Waste Collection Process

This product was specifically designed so that it does not need human intervention during the waste collection process.

You do not need to remove the BinSpring™. Due to gravity, once the bin is tipped upside down, this clever device will allow the lid to open and the rubbish to be removed.

When finished, the BinSpring™ will then close the lid and keep it closed.

Removal To remove the BinSpring™, use your thumbs to push the BinSpring™ away from the handle and towards the bin.
